Bhyri Anush Goud

Gcp Devops

Hyderabad, India · goudanush40@gmail.com · 9703380738

Verified Cloud-ID

Bilingual DevOps Engineer with over 5 years of experience in designing, testing, and implementing infrastructure and applications. Skilled in using source control tools to ensure high-quality software delivery, and recognized for efficiently managing multiple tasks while fostering collaboration within diverse teams. Committed to driving innovation and optimizing processes to enhance operational performance.

Core competencies

Technical: Linux, GitHub Actions, CI/CD Pipelines, Cloud Monitoring, Terraform for Iac, DevOps -Kubernetes, Configuration Management

Soft: communication, Good at problem-solving, Adaptability & Continuous Learning, Incident Management & Stakeholder Coordination

Work Experience

Gcp Devops Engineer at **Kyndryl Solutions Pvt. Ltd**

Hyderabad, India (Apr 2022 - Present)

- Designed and deployed GCP infrastructure using Terraform, improved code deployment efficiency with CI/CD pipelines, optimized GKE clusters, reduced operational costs, implemented CI/CD using Cloud Build and GitHub, containerized microservices, developed Stackdriver dashboards, automated IAM provisioning, maintained version control systems, led zero-downtime GKE rollouts, provided 24/7 on-call support.

Devops Engineer at **Artech Infosystems**

Hyderabad, India (Jun 2021 - Mar 2022)

- Built CI/CD pipelines using GitLab CI and GCP Cloud Build, designed containerization strategies, monitored automated build processes, automated tasks through scripting, provided 24/7 on-call support, automated infrastructure provisioning using Terraform, deployed workloads on GKE, implemented ingress with Cloud Load Balancers.

Projects

ICICI-Phonepe-Project

(Mar 2024)

- On-Premise / GCP - PhonePe Banking Application | April 2024 - Present Provided DevOps and production infrastructure support for the PhonePe banking application, ensuring availability, reliability, and smooth deployment of application services
- Managed Jenkins-based CI/CD processes including build jobs, deployment jobs, scheduling, node/agent administration, plugin management, pipeline monitoring, and troubleshooting
- Supported Docker-based microservices deployments and maintained container images and application artifacts using Google Artifact Registry
- Managed Kubernetes/GKE environments, including cluster health, namespaces, services, deployments, pods, application troubleshooting, and day-to-day operational activities
- Implemented and maintained IAM access controls, service accounts, permissions, and role-based access for cloud resources in accordance with security requirements
- Worked on GCP networking components, including HTTP/HTTPS Load Balancers, traffic routing, backend services, health checks, and Cloud Armor security policies
- Utilized Cloud Scheduler and Cloud Functions to support scheduled and event-driven automation activities
- Managed infrastructure configuration using Chef, supporting consistent server configurations and infrastructure provisioning
- Performed server, application, network, and Kubernetes troubleshooting, including analysis of logs, connectivity, ports, services, resource utilization, and application health
- Created and customized monitoring dashboards and alerts according to client/application requirements and performed continuous infrastructure monitoring
- Participated in incident, problem, and change management processes, including troubleshooting, escalation, RCA, change implementation, and post-change validation
- Supported production deployments, maintenance activities, and release coordination while following defined change-management and operational procedures
- Participated in 24×7 on-call support and incident escalation rotations, ensuring timely response and restoration of critical production services
- Collaborated with development, API, network, security, database, and infrastructure teams for deployment, troubleshooting, access management, and production issue resolution.

ICICI-GPAY-Project

(Jun 2021)

- Managed and supported GCP cloud infrastructure for the Google Pay application, including Compute, Kubernetes, IAM, networking, load balancing, and security services
- Configured and administered Jenkins CI/CD infrastructure, including Jenkins nodes/agents, plugins, jobs, scheduled builds, pipeline execution, and system-log monitoring
- Containerized and deployed microservices using Docker, including Docker Compose and container image management through Google Artifact Registry
- Created, configured, and maintained Google Kubernetes Engine (GKE) clusters, namespaces, services, deployments, and workloads, ensuring application availability and scalability
- Managed GCP IAM by provisioning and maintaining appropriate roles, permissions, service accounts, and access controls based on security and operational requirements
- Worked on HTTP/HTTPS Load Balancers and Cloud Armor for application traffic management, security, and protection against unwanted/malicious traffic
- Configured and supported Cloud Functions and Cloud Scheduler for event-driven automation and scheduled operational activities
- Managed Chef Configuration Management for infrastructure provisioning, configuration consistency, and server/application administration
- Performed cloud data and workload migration activities between GCP projects, coordinating dependencies and validating services after migration
- Developed and customized monitoring dashboards based on client requirements and continuously monitored application, server, and infrastructure health
- Performed production troubleshooting across application, Linux server, network, Kubernetes, and cloud infrastructure layers and provided timely incident resolution
- Participated in 24×7 production support and on-call incident management, including incident escalation, root-cause analysis, service restoration, and post-incident activities
- Researched and evaluated new DevOps/cloud technologies for automation, infrastructure optimization, operational improvements, and client project requirements.

Education

Vaagdevi College of Engineering (2017)
B.Tech in Electrical, Electronics And Communications Engineering
Graduation with Distinction, Final Grade: 65%

VMR Polytechnic (2014)
Diploma in Electrical, Electronics And Communications Engineering
Graduation with Distinction, Final Grade: 70%

Certificates

- **Google Cloud Professional Cloud Architect** Apr 2022
- **Google Cloud Associate Cloud Engineer** Apr 2022
- **Google Cloud Professional Cloud Developer** Apr 2022
- **Google Cloud Professional DevOps Engineer** Apr 2022
